- 3 years of experience in IT Security
- With data-driven business processes
- Technical knowledge of the Security Domain
- Able to offer hands-on support

📍 Amersfoort / Cloppenburg / Neurenberg

📁 Minimum of 3 years experience

Leading business bicycle provider in multiple European countries, Bike Mobility Services (BMS), helps to speed up the electrification and sustainability of mobility in urban areas. The technically well-versed IT Security Specialist will help bring the company's security standards to the next level, and help provide more value for new and existing customers.

ABOUT THE COMPANY

Bike Mobility Services

Sustainability, flexibility, and employee satisfaction are high on the agenda for employers worldwide. This, together with urbanization and a push for electrification, makes the bicycle more relevant than ever before. Bike Mobility Services (BMS) has the ambition to get all European and US employees cycling to work. B2B business bicycle provider BMS holds the market leader or top positions in the Netherlands, Germany, Belgium, and Austria, with more to come. BMS offers a digital platform that facilitates bicycle leasing and bicycle sharing for companies, their employees and more than five thousand bike dealers. BMS markets its bike services via the brands Lease a Bike, Business Bike, Movelo, FietsNED, and B2Bike.

BMS is part of mobility provider Pon.BIKE Business Group, the largest bike manufacturer in the world. Pon is an international trade and service organization with almost thirteen thousand employees spread over 450 offices in thirty-two countries, and one of the largest family businesses in the Netherlands. Examples of brands within the Pon family are Porsche, Audi, Gazelle, Kalkhoff, and Caterpillar. Running a sustainable business is one of the pillars of Pon's strategy. Pon has launched a carbon-neutral strategy, with the objective to implement all Pon activities without any carbon footprint. As of 2018, Pon is entirely carbon neutral in the Netherlands and since 2021 also in the rest of Europe. Due to the digitization of BMS' business, providing IT security assurance is an essential part of their current and future growth.

VACANCY

IT Security Specialist (m/w/d)

The IT Security Specialist will cover all aspects of end-to-end IT Security, both technical and non-technical, in a very agile team. They will be the driving force for the end-to-end cybersecurity solutions and support within BMS, from firewalls and endpoint security to increasing the security literacy, to collaborating with business teams on tenders. This means they will be providing value to the backbone of the company, but also to the commercial frontline and even directly to the end-customers enjoying their leased bikes.

This role encompasses being in the lead on security during the Security & Privacy Intakes for new digital initiatives within BMS and providing answers to the business on more complex IT security questions. The IT Security Specialist will be the IT security ambassador within BMS who proactively advocates the importance of security, awareness, and improvements. As such, they will also travel between offices on a regular basis. The offices are located in The Netherlands, Germany, Sweden, Austria, Belgium and the US.

The IT Security Specialist will be part of BMS' Digital team and work closely with the responsible IT security persons of Pon.BIKE. They will report hierarchically to the Digital Director of IT at BMS, and functionally to the IT Security Manager at Pon.BIKE from the Global Pon Security & Privacy Office. This means that there is direct access to all of the highly advanced technology & tools that are used within Pon.

The most important challenge for this role in the next one to two years will be upgrading several key aspects of IT security for BMS. Next to that, the IT Security Specialist will work on the continuous improvement, documenting and providing proof of the work being done on security to get an assurance report (like SOC2).

The IT Security Specialist should have a solid background in IT Security and be able to support (hands on) on the implementation of the required security solutions and measures. They should also have an overview and understanding of what's going on at all levels, to be able to communicate strategically about it across the board. This role is an exciting opportunity for a high-potential, technically well-versed IT Security Specialist, who resonates with BMS' mission of getting every employee biking to work. ■

Interested? Bike Mobility Services is working with Top of Minds to fill this vacancy. To express your interest, please contact Sandro Schapals at sandroschapals@topofminds.com.

“ In this role you can help build the security capability within a scale-up environment, while playing with the cutting-edge security tools that Pon can provide.”

Marc Giesbers, IT Security and Privacy specialist
